

Mathematics overview: Stage 6

Unit	Hours	Knowledge
Numbers and the number system	6	<ul style="list-style-type: none"> identify the value of each digit in numbers given to three decimal places and multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places read, write, order and compare numbers up to 10 000 000 and determine the value of each digit use negative numbers in context, and calculate intervals across zero (including addition and subtraction of negative numbers)
Calculating	6	<ul style="list-style-type: none"> use the concepts and vocabulary of prime numbers, factors (divisors), multiples, common factors, highest common factor and lowest common multiple (NEW)
Calculating: division	6	<ul style="list-style-type: none"> use positive integer powers and associated real roots (square, cube and higher), recognising powers of 2,3,4,5 (NEW, ALSO 7) recognise and use relationships between operations, including inverse operations (e.g cancellation to simplify calculations and expressions) (NEW, ALSO 7)
Visualising and constructing	6	<ul style="list-style-type: none"> perform mental calculations, including with mixed operations and large numbers multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication add and subtract whole numbers with more than four digits, including using formal written methods (column addition and subtraction) (NEW)
Investigating properties of shapes	9	<ul style="list-style-type: none"> divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division; interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context use written division methods in cases where the answer has up to two decimal places use their knowledge of the order of operations to carry out calculations involving the four operations recognise, describe and build simple 3-D shapes, including making nets
Algebraic proficiency: tinkering	9	<ul style="list-style-type: none"> compare and classify geometric shapes based on their properties and sizes illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius draw 2-D shapes using given dimensions and angles (NEW)
Exploring fractions, decimals and percentages	9	<ul style="list-style-type: none"> use conventional terms and notations: points, lines, vertices, edges, planes, parallel lines, perpendicular lines, right angles, polygons, regular polygons and polygons with reflection and/or rotational symmetry (NEW, ALSO 7) use the standard conventions for labelling and referring to the sides and angles of triangles (NEW, ALSO 7) identify properties of the faces, surfaces, edges and vertices of: cubes, cuboids, prisms, cylinders, pyramids, cones and spheres (NEW, ALSO 7) understand and use the concepts and vocabulary of expressions, equations, formulae, terms and factors (ALSO 7) use and interpret algebraic notation, including: ab in place of $a \times b$, $3y$ in place of $y + y + y$ and $3 \times y$, a^2 in place of $a \times a$, a^3 in place of $a \times a \times a$, a/b in place of $a \div b$, brackets (ALSO 7)
Proportional reasoning	6	<ul style="list-style-type: none"> simplify and manipulate algebraic expressions by collecting like terms and multiplying a single term over a bracket (ALSO 7) where appropriate, interpret simple expressions as functions with inputs and outputs (ALSO 7) substitute numerical values into formulae and expressions (ALSO 7)
Pattern sniffing	3	<ul style="list-style-type: none"> use conventional notation for priority of operations, including brackets (ALSO 7)
Measuring space	3	<ul style="list-style-type: none"> use common factors to simplify fractions; use common multiples to express fractions in the same denomination (ALSO 7) compare and order fractions, including fractions > 1 recall and use equivalences between simple fractions, decimals and percentages, including in different contexts (ALSO 7)
Investigating angles	3	<ul style="list-style-type: none"> solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts. solve problems involving similar shapes where the scale factor is known or can be found solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.
Calculating fractions, decimals and percentages	9	<ul style="list-style-type: none"> generate and describe linear number sequences recognise and use sequences of triangular, square and cube numbers, simple arithmetic progressions (NEW) use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit, and vice versa, using decimal notation to up to three decimal places

<u>Solving equations and inequalities</u>	3	<ul style="list-style-type: none"> • measure line segments and angles in geometric figures (NEW) • recognise angles where they meet at a point, are on a straight line, or are vertically opposite, and find missing angles • add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions • multiply simple pairs of proper fractions, writing the answer in its simplest form [for example, $1/4 \times 1/2 = 1/8$] • divide proper fractions by whole numbers [for example, $1/3 \div 2 = 1/6$] • multiply one-digit numbers with up to two decimal places by whole numbers • solve problems involving the calculation of percentages [for example, of measures, and such as 15% of 360] and the use of percentages for comparison • define percentage as 'number of parts per hundred' (NEW) • enumerate possibilities of combinations of two variables • express missing number problems algebraically • find pairs of numbers that satisfy an equation with two unknowns • calculate the area of parallelograms and triangles • calculate, estimate and compare volume of cubes and cuboids using standard units, including cubic centimetres (cm³) and cubic metres (m³), and extending to other units [for example, mm³ and km³] • recognise when it is possible to use formulae for area and volume of shape • solve problems involving the calculation and conversion of units of measure, using decimal notation up to three decimal places where appropriate • calculate perimeters of 2D shapes (NEW) • solve problems which require answers to be rounded to specified degrees of accuracy • round any whole number to a required degree of accuracy • describe positions on the full coordinate grid (all four quadrants) • draw and translate simple shapes on the coordinate plane, and reflect them in the axes • interpret and construct pie charts and line graphs and use these to solve problems • calculate and interpret the mean, mode, median and range as an average • relate relative expected frequencies to theoretical probability, using appropriate language and the 0 - 1 probability scale (NEW, ALSO 7)
<u>Calculating space</u>	9	
<u>Checking, approximating and estimating</u>	3	
<u>Mathematical movement</u>	3	
<u>Presentation of data</u>	3	
<u>Measuring data</u>	3	
<u>Understanding Risk</u>	3	

KNOWLEDGE	The Big Picture: Number and Place Value progression map
<ul style="list-style-type: none"> • identify the value of each digit in numbers given to three decimal places and multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places • read, write, order and compare numbers up to 10 000 000 and determine the value of each digit • use negative numbers in context, and calculate intervals across zero (including addition and subtraction of negative numbers) • use the concepts and vocabulary of prime numbers, factors (divisors), multiples, common factors, highest common factor and lowest common multiple (NEW) • use positive integer powers and associated real roots (square, cube and higher), recognising powers of 2,3,4,5 (NEW, ALSO 7) • recognise and use relationships between operations, including inverse operations (e.g cancellation to simplify calculations and expressions) (NEW, ALSO 7) 	

SKILLS	Suggested resources
<ul style="list-style-type: none"> • Understand place value in numbers with up to three decimal places • Multiply whole numbers by 10 (100, 1000) • Divide whole numbers by 10 (100, 1000) when the answer is a whole number • Multiply (divide) numbers with up to three decimal places by 10 (100, 1000) • Understand (order, write, read) place value in numbers with up to eight digits • Understand and use negative numbers when working with temperature • Understand and use negative numbers when working in other contexts • Know the meaning of a common multiple (factor) of two numbers • Identify common multiples (factors) of two numbers <p>Know how to test if a number up to 120 is prime</p>	<p>KM: Maths to Infinity: Directed numbers</p> <p>KM: Extend the idea of Eratosthenes' sieve to a 12 by 12 grid</p> <p>KM: Exploring primes activities: Artistic Eratosthenes sieve</p> <p>KM: Use Powers of ten to demonstrate connections.</p> <p>NRICH: Factor-multiple chains</p> <p>NRICH: The Moons of Vuvv</p> <p>NRICH: Round and round the circle</p> <p>NRICH: Counting cogs</p> <p>Learning review</p> <ul style="list-style-type: none"> • www.diagnosticquestions.com

Prerequisites	Mathematical language	Agreed Common Teaching Approaches
<ul style="list-style-type: none"> • Understand and use place value in numbers with up to seven digits • Multiply and divide whole numbers by 10, 100, 1000 • Multiply and divide numbers with one decimal place by 10, 100, 1000 • Know the meaning of 'factor' and 'multiple' and 'prime' <p>Bring on the Maths*: Moving on up! Number and Place Value: v1 Solving problems: v3</p>	Place value Digit Negative number (Common) multiple (Common) factor Divisible Prime number, Composite number	Zero is neither positive nor negative. When multiplying and dividing by powers of ten, the decimal point is fixed and it is the digits that move. Ensure that pupils can deal with large numbers that include zeros in the HTh and/or H column (e.g. 43 006 619) NCETM: Glossary <p>Common approaches <i>The following definition of a prime number should be used in order to minimise confusion about 1: A prime number is a number with exactly two factors.</i> Every classroom has a set of number classification posters, a place chart and a negative number washing line on the wall.</p>
Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
<ul style="list-style-type: none"> • Convince me that 109 is a prime number • Jenny writes $2.54 \times 10 = 25.4$. Kenny writes $2.54 \times 10 = 25.40$. Who do you agree with? Explain why. • Look at this number (24 054 028). Show me another number (with 4, 5, 6, 7 digits) that includes a 5 with the same value. And another. And another ... 		<ul style="list-style-type: none"> • Some pupils can confuse the language of large (and small) numbers since the prefix 'milli-' means 'one thousandth' (meaning that there are 1000 millimetres in a metre for example) while one million is actually a thousand thousand. • Some pupils may not realise that degrees (°) and degrees Celsius (°C) are two different and distinct units of measurement • Some pupils may think that 1 is a prime number

KNOWLEDGE

The Big Picture: [Calculation progression map](#)

- perform mental calculations, including with mixed operations and large numbers
- multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication
- add and subtract whole numbers with more than four digits, including using formal written methods (column addition and subtraction) (NEW)

SKILLS		Suggested resources
<ul style="list-style-type: none"> • Combine addition and subtraction when multiplying mentally • Multiply a two-digit number by a single-digit number mentally • Add a three-digit number to a two-digit number mentally (when bridging of hundreds is required) • Multiply a four-digit number by a two-digit number using long multiplication • Identify when addition, subtraction or multiplication is needed as part of solving multi-step problems • Explain why addition or subtraction is needed at any point when solving multi-step problems • Solve multi-step problems involving addition, subtraction and/or multiplication • Know that addition and subtraction have equal priority • Know that multiplication and division have equal priority Know that multiplication and division take priority over addition and subtraction		KM: Long multiplication template KM: Maximise, minimise . Adapt ideas to fit learning intentions. KM: Maths to Infinity: Complements KM: Maths to Infinity: Multiplying and dividing NRICH: Become Maths detectives NRICH: Exploring number patterns you make NRICH: Reach 100 Learning review <ul style="list-style-type: none"> • www.diagnosticquestions.com
Prerequisites	Mathematical language	Agreed Common Teaching Approaches
<ul style="list-style-type: none"> • Recall multiplication facts for multiplication tables up to 12×12 • Recall division facts for multiplication tables up to 12×12 • Understand the commutativity of multiplication and addition • Multiply a three-digit number by a two-digit number using short multiplication • Use column addition and subtraction for numbers with more than four digits Bring on the Maths*: Moving on up! Calculating: v1 Solving problems: v1	Addition Subtraction Sum, Total Difference, Minus, Less Column addition Column subtraction Operation Multiply, Multiplication, Times, Product Commutative Factor Short multiplication Long multiplication Estimate	The grid method is promoted as a method that aids numerical understanding and later progresses to multiplying algebraic statements. Use a basic and a scientific calculator to work out $2 + 3 \times 5$. Why are the answers different? KM: Calculation overview NCETM: The Bar Model I : addition and subtraction NCETM: The Bar Model II : multiplication and division NCETM: Subtraction and multiplication NCETM: Multiplicative reasoning NCETM: Glossary Common approaches <i>To avoid confusion with language, all teachers use 'sum' to refer only to the result of an addition. Teachers say 'complete these calculations' instead of 'complete these sums'</i> <i>Long multiplication is promoted as the 'most efficient method'.</i> <i>If any acronym is promoted to help remember the order of operations, then BIDMAS is used to strengthen progression as the I stands for indices.</i>
Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
<ul style="list-style-type: none"> • Find missing digits in otherwise completed long multiplication calculations • Convince me that $2472 \times 12 = 29664$ • Why have you chosen to add (subtract, multiply)? 		<ul style="list-style-type: none"> • Some pupils may write statements such as $140 - 190 = 50$ • When subtracting mentally some pupils may deal with columns separately and not combine correctly; e.g. $180 - 24$: $180 - 20 = 160$. Taking away 4 will leave 6. So the answer is 166. • The use of BIDMAS (or BODMAS) can imply that division takes priority over multiplication, and that addition takes priority over subtraction. This can result in incorrect calculations.

KNOWLEDGE	The Big Picture: Calculation progression map
<ul style="list-style-type: none"> • divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division; interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context • use written division methods in cases where the answer has up to two decimal places • use their knowledge of the order of operations to carry out calculations involving the four operations 	

SKILLS	Suggested resources
<ul style="list-style-type: none"> • Use short division to divide a four-digit number by a one-digit number • Use short division to divide a three- (or four-) digit number by a two-digit number • Understand the method of long division • Use long division to find the remainder at each step of the division • Know how to write, and use, the remainder at each step of the division • Use long division to divide a three- (or four-) digit number by a two-digit number • Write the remainder to a division problem as a remainder • Write the remainder to a division problem as a fraction • Extend beyond the decimal point to write the remainder as a decimal • Identify when division is needed to solve a problem • Extract the correct information from a problem and set up a written division calculation <p>Interpret a remainder when carrying out division</p>	<p>KM: Dividing (lots) KM: Maths to Infinity: Multiplying and dividing KM: Interactive long division NRICH: Interactive division NRICH Dicey Operations. Prerequisites	Mathematical language	Agreed Common Teaching Approaches
<ul style="list-style-type: none"> • Use knowledge of multiplication tables when dividing • Know how to use short division 	Commutative Divide, Division, Divisible Divisor, Dividend, Quotient, Remainder Factor Short division Long division Remainder Operation Estimate Notation Remainders are often abbreviated to 'r' or 'rem'	Long division is a method of division that formalises how to find a remainder at each step. Short division is a compact method that uses pupils' abilities to find this remainder without the need for a formal written method. An alternative to both these methods is 'Galley division'. KM: Calculation overview NCETM: The Bar Model NCETM: Division NCETM: Glossary Common approaches <i>The use of long multiplication is promoted as the 'most efficient method'. Short division is promoted as the 'most efficient method'. When dealing with remainders in division problems, use the notation 'r'</i>

Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
<ul style="list-style-type: none"> • Find missing digits in otherwise completed long / short division calculations • Show me a calculation that is connected to $147 \times 26 = 3822$. And another, and another ... • Show me a division calculation that has no remainder. Now show me a division by a two-digit number that has no remainder. And now, a four-digit number divided by a two-digit number that has no remainder. And now, with a remainder of 3 ... 		<ul style="list-style-type: none"> • Some pupils may write statements such as $12 \div 132 = 11$ • Formal written methods of addition, subtraction and multiplication work from right to left. Formal division works from left to right. • When using short division many pupils will at first struggle to deal correctly with any division where the divisor is greater than the first digit of the dividend; for example: $\begin{array}{r} 0 \quad 10 \quad 7 \quad r5 \\ 8 \overline{) 3 \quad 6 \quad 1} \end{array}$ 3 ÷ 8 = 0 remainder 3, and so the 3 should be moved across. Instead, the 8 has been 'moved across' and therefore everything that follows has been correctly carried out based on an early misunderstanding.

KNOWLEDGE

The Big Picture: [Properties of Shape progression map](#)

- recognise, describe and build simple 3-D shapes, including making nets

SKILLS		Suggested resources
<ul style="list-style-type: none"> Use a protractor to draw angles up to 180° Use a protractor to work out and construct reflex angles Use a ruler to draw lines to the nearest millimetre Use squared paper to guide construction of 2D shapes Complete tessellations of given shapes Know the names of common 3D shapes Use mathematical language to describe 3D shapes Construct 3D shapes from given nets Use 'Polydron' to construct nets for common 3D shapes Draw accurate nets for common 3D shapes Find all the nets for a cube <p>Use a net to visualise the edges (vertices) that will meet when folded</p>		<p>KM: Visualising 3D shapes KM: Tessellating Tess KM: Fibonacci's disappearing squares KM: Unravelling dice NRICH: Making spirals NRICH: Cut nets NRICH: Making cuboids</p> <p>Learning review</p> <ul style="list-style-type: none"> www.diagnosticquestions.com
Prerequisites	Mathematical language	Agreed Common Teaching Approaches
<ul style="list-style-type: none"> Know the names of common 2D shapes Know the names of common 3D shapes Use a protractor to measure and draw angles 	<p>Protractor Measure Nearest Construct Sketch Cube, Cuboid, Cylinder, Pyramid, Prism Net Edge, Face, Vertex (Vertices) Visualise</p> <p>Notation Dash notation to represent equal lengths in shapes and geometric diagrams Right angle notation</p>	<p>A prism must have a polygonal cross-section, and therefore a cylinder is not a prism. Similarly, a cone is not a pyramid. A cube is a special case of a cuboid, and a cuboid is a special case of a prism. Many pupils struggle to sketch 3D shapes. A good strategy for any type of prism is to draw the cross-section (using squares for guidance), and then draw a second identical shape offset from the first. The matching corners can then be joined with straight lines. Some dotted lines (or rubbing out of lines) will be required. NCETM: Glossary</p> <p>Common approaches <i>Every classroom has a set of 3D shape posters on the wall Models of 3D shapes to be used by all students during this unit of work All pupils to use 'Polydron' to explore nets of 3D shapes during this unit of work</i></p>
Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
<ul style="list-style-type: none"> Show me an example of a net of a cube. And another. And another ... What is wrong with this attempt at a net of a cuboid? How can it be changed?  <ul style="list-style-type: none"> How many different ways are there to complete these nets? 		<ul style="list-style-type: none"> Some pupils will read the wrong way round the scale on a typical semi-circular protractor, therefore using 180° - required angle Some pupils may measure from the end of a ruler, rather than the start of the measuring scale Some pupils may think that several repeats of a shape in any pattern constitutes a tessellation When given a net of a 3D shape some pupils may think that the number of vertices of the 3D shape is found by counting the number of 'corners' on the net

KNOWLEDGE

The Big Picture: [Properties of Shape progression map](#)

- compare and classify geometric shapes based on their properties and sizes
- illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius
- draw 2-D shapes using given dimensions and angles (NEW)
- use conventional terms and notations: points, lines, vertices, edges, planes, parallel lines, perpendicular lines, right angles, polygons, regular polygons and polygons with reflection and/or rotational symmetry (NEW, ALSO 7)
- use the standard conventions for labelling and referring to the sides and angles of triangles (NEW, ALSO 7)
- identify properties of the faces, surfaces, edges and vertices of: cubes, cuboids, prisms, cylinders, pyramids, cones and spheres (NEW, ALSO 7)

SKILLS

Suggested resources

- Know the definitions of special triangles
 - Know the definitions of special quadrilaterals
 - Classify 2D shapes using given categories; e.g. number of sides, symmetry
 - Know the angle sum of a triangle
 - Know the angle sum of a quadrilateral
 - Know how to find the angle sum of a any polygon
 - Use the angle sum of a triangle to find missing angles
 - Find the missing angle in an isosceles triangle when only one angle is known
 - Use the angle sum of a quadrilateral to find missing angles
- Know how to find the size of one angle in any regular polygon

KM: [Shape work](#): Many of the activities are suitable for this unit.KM: [Dotty activities](#)KM: [Investigating polygons](#). Tasks one and two.KM: [Special polygons](#)NRICH: [Where Are They?](#)NRICH: [Round a Hexagon](#)NRICH: [Quadrilaterals](#)KM: [6 point circles](#), [8 point circles](#) and [12 point circles](#) can be used to support and extend the above idea

Learning review

- www.diagnosticquestions.com

Prerequisites

- Know the properties of rectangles
- Know the difference between a regular and an irregular polygon
- Add and subtract numbers up to three digits

Mathematical language

Quadrilateral, Square, Rectangle, Parallelogram, (Isosceles) Trapezium, Kite, Rhombus, Delta, Arrowhead
 Triangle, Scalene, Right-angled, Isosceles, Equilateral
 Polygon, Regular, Irregular
 Pentagon, Hexagon, Octagon, Decagon, Dodecagon
 Circle, Radius, Diameter, Circumference, Centre
 Parallel
 Diagonal
 Angle

Notation

Dash notation to represent equal lengths in shapes and geometric diagrams
 Right angle notation

Agreed Common Teaching Approaches

Ensure that pupils do not use the word 'diamond' to describe a kite, or a square that is 45° to the horizontal. 'Diamond' is not the mathematical name of any shape.

A square is a special case of a rectangle. An oblong is a rectangle that is not a square.

A rhombus is a special case of a parallelogram.

All polygons up to 20 sides have names, although many have alternatives based on either Latin or Greek.

Splitting any polygon into triangles (by drawing all diagonals from one vertex) will allow pupils to find the angle sum of the polygon.

NCETM: [Glossary](#)

Common approaches

All teachers refer to a 'delta' instead of an 'arrowhead'

Every classroom has a set of [triangle posters](#) and [quadrilateral posters](#) on the wall

Reasoning opportunities and probing questions

- Convince me that a rhombus is a parallelogram
- Jenny writes that 'Diameter = 2 × Radius'. Kenny writes that 'Radius = 2 × Diameter'. Who is correct?
- What is the same and what is different: a square and a rectangle?

Cross Curricular Links

Possible misconceptions

- Some pupils may think that a 'regular' polygon is a 'normal' polygon
- Some pupils may think that all polygons have to be regular
- Some pupils may think that a square is only square if 'horizontal', and even that a 'non-horizontal' square is called a diamond
- The equal angles of an isosceles triangle are not always the 'base angles' as some pupils may think

KNOWLEDGE

The Big Picture: [Algebra progression map](#)

- understand and use the concepts and vocabulary of expressions, equations, formulae, terms and factors (ALSO 7)
- use and interpret algebraic notation, including: ab in place of $a \times b$, $3y$ in place of $y + y + y$ and $3 \times y$, a^2 in place of $a \times a$, a^3 in place of $a \times a \times a$, a/b in place of $a \div b$, brackets (ALSO 7)
- simplify and manipulate algebraic expressions by collecting like terms and multiplying a single term over a bracket (ALSO 7)
- where appropriate, interpret simple expressions as functions with inputs and outputs (ALSO 7)
- substitute numerical values into formulae and expressions (ALSO 7)
- use conventional notation for priority of operations, including brackets (ALSO 7)

SKILLS

- Know the meaning of expression, term, formula, equation, function
- Know basic algebraic notation (the rules of algebra)
- Use letters to represent variables
- Identify like terms in an expression
- Simplify an expression by collecting like terms
- Know how to multiply a (positive) single term over a bracket (the distributive law)
- Substitute positive numbers into expressions and formulae
- Given a function, establish outputs from given inputs
- Given a function, establish inputs from given outputs
- Use a mapping diagram (function machine) to represent a function
- Use an expression to represent a function
- Use the order of operations correctly in algebraic situations

Suggested resources

- KM: [Pairs in squares](#). Prove the results algebraically.

 NRICH: [Your number is ...](#)
 NRICH: [Crossed ends](#)
 NRICH: [Number pyramids](#) and [More number pyramids](#)
- Learning review**
- www.diagnosticquestions.com

Prerequisites Mathematical language Agreed Common Teaching Approaches

- Use symbols (including letters) to represent missing numbers
 - Substitute numbers into worded formulae
 - Substitute numbers into simple algebraic formulae
 - Know the order of operations
- Bring on the Maths*: Moving on up!**
 Algebra: v1

Algebra
 Expression, Term, Formula (formulae), Equation, Function, Variable
 Mapping diagram, Input, Output
 Represent
 Substitute
 Evaluate
 Like terms
 Simplify / Collect

Notation
 See key concepts above

Pupils will have experienced some algebraic ideas previously. Ensure that there is clarity about the distinction between representing a variable and representing an unknown.
 Note that each of the statements $4x$, 42 and $4\frac{1}{2}$ involves a different operation after the 4, and this can cause problems for some pupils when working with algebra.
 NCETM: [Algebra](#)
 NCETM: [Glossary](#)

Common approaches
All pupils are expected to learn about the connection between mapping diagrams and formulae (to represent functions) in preparation for future representations of functions graphically.

Reasoning opportunities and probing questions Cross Curricular Links Possible misconceptions

- Show me an example of an expression / formula / equation
- Always / Sometimes / Never: $4(g+2) = 4g+8$, $3(d+1) = 3d+1$, $a^2 = 2a$, $ab = ba$
- [What is wrong?](#)
- Jenny writes $2a + 3b + 5a - b = 7a + 3$. Kenny writes $2a + 3b + 5a - b = 9ab$. What would you write? Why?

Cross Curricular Links

- Some pupils may think that it is always true that $a=1$, $b=2$, $c=3$, etc.
- A common misconception is to believe that $a^2 = a \times 2 = a2$ or $2a$ (which it can do on rare occasions but is not the case in general)
- When working with an expression such as $5a$, some pupils may think that if $a=2$, then $5a = 52$.
- Some pupils may think that $3(g+4) = 3g+4$
- The convention of not writing a coefficient of 1 (i.e. ‘ $1x$ ’ is written as ‘ x ’ may cause some confusion. In particular some pupils may think that $5h - h = 5$

KNOWLEDGE

The Big Picture: [Fractions, decimals and percentages progression map](#)

- use common factors to simplify fractions; use common multiples to express fractions in the same denomination (ALSO 7)
- compare and order fractions, including fractions > 1
- recall and use equivalences between simple fractions, decimals and percentages, including in different contexts (ALSO 7)

SKILLS

- Understand that two fractions can be equivalent
- Identify a common factor of two numbers
- Simplify a fraction
- Write a fraction in its lowest terms
- Confirm that a fraction is written in its lowest terms
- Compare two fractions by considering diagrams
- Compare two fractions by considering equivalent fractions
- Compare two top-heavy fractions
- Understand that a fraction is also a way of representing a division
- Know standard fraction / decimal equivalences (e.g. $\frac{1}{2} = 0.5$, $\frac{1}{4} = 0.25$, $\frac{1}{10} = 0.1$)
- Work out the decimal equivalents of fifths, eighths and tenths
- Know standard fraction / decimal / percentage equivalences (e.g. 10%, 25%, 50%, 75%)
- Work out the percentage equivalents of fifths, eighths and tenths

Use the equivalence between fractions, decimals and percentages when solving problems

Suggested resources

- KM: [Fraction action](#)
 KM: [FDP conversion](#)
 KM: [Carpets](#)
 KM: [Fraction and decimal tables](#)
 NRICH: [Matching fractions](#)
 NRICH: [Fractions made faster](#)
- Learning review**
- www.diagnosticquestions.com

Prerequisites

- Understand the concept of a fraction as a proportion
- Understand the concept of equivalent fractions
- Understand the concept of fractions, decimals and percentages being equivalent
- Know that a percentage means 'out of 100'

Mathematical language

Fraction
 Improper fraction, Proper fraction, Vulgar fraction, Top-heavy fraction
 Percentage
 Decimal
 Proportion
 Simplify
 Equivalent
 Lowest terms

Notation

Diagonal fraction bar / horizontal fraction bar

Agreed Common Teaching Approaches

Use language carefully to avoid later confusion: when simplifying fractions, the language 'divide by 4' should not be used in place of 'divide the top and bottom by 4'. A fraction can be divided by 4, but that is not the same as cancelling a common factor of the numerator and denominator by dividing them by 4.

NRICH: [Teaching fractions with understanding](#)
 NCETM: [Teaching fractions](#)
 NCETM: [Glossary](#)

Common approaches

All pupils are made aware that 'per cent' is derived from Latin and means 'out of one hundred'
Teachers use the horizontal fraction bar notation at all times

Reasoning opportunities and probing questions

- Show me another fraction that is equivalent to this one. And another. And another ...
- Convince me that $\frac{3}{8} = 0.375$
- If you know that $\frac{1}{10} = 0.1 = 10\%$, what else can you work out?
- Jenny is simplifying fractions. She has the fraction $\frac{16}{64}$. Jenny says, 'if I cancel out the sixes then $\frac{16}{64} = \frac{1}{4}$ '. Do you agree with Jenny? Why?

Cross Curricular Links

Possible misconceptions

- A fraction can be visualised as divisions of a shape (especially a circle) but some pupils may not recognise that these divisions must be equal in size, or that they can be divisions of any shape.
- Pupils may not make the connection that a percentage is a different way of describing a proportion
- Some pupils may think that simplifying a fraction just requires searching for, and removing, a factor of 2 (repeatedly)

KNOWLEDGE

The Big Picture: [Ratio and Proportion progression map](#)

- solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts.
- solve problems involving similar shapes where the scale factor is known or can be found
- solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.

SKILLS		Suggested resources
<ul style="list-style-type: none"> Understand that pie charts are used to show proportions Make statements about proportions shown in a pie charts Make statements to compare proportions in pie charts Use additional information to make statements about frequencies in pie charts Use a table of frequencies to work out the angle for a slice in a pie chart Construct a pie chart by measuring angles Identify the scale used on the axes of a graph Read values from a line graph involving scaling Use scaling when constructing line graphs <p>Answer two-step questions about data in line graphs (e.g. 'How much more?')</p>		<p>KM: Stick on the Maths HD6: Graphs and diagrams</p> <p>NRICH: Match the Matches</p> <p>NRICH: Graphing Number Patterns</p> <p>NCETM: A little bit of history (Britain since 1945)</p> <p>Learning review</p> <ul style="list-style-type: none"> www.diagnosticquestions.com
Prerequisites	Mathematical language	Agreed Common Teaching Approaches
<ul style="list-style-type: none"> Measure and construct angles using a protractor Interpret and construct a simple line graph 	<p>Data</p> <p>Scale</p> <p>Axis, axes</p> <p>Graph</p> <p>Frequency</p> <p>Time graph, Time series</p> <p>Line graph</p> <p>Pie chart</p> <p>Sector</p> <p>Angle</p> <p>Protractor</p> <p>Degrees</p> <p>Maximum, minimum</p>	<p>In Stage 6, when constructing pie charts the total of the frequencies is always a factor of 360 More complex cases are included in later stages.</p> <p>William Playfair, a Scottish engineer and economist, introduced the line graph in 1786. He also introduced the pie chart in 1801.</p> <p>NCETM: Glossary</p> <p>Common approaches</p> <p><i>Pie charts are constructed by calculating the angle for each section by dividing 360 by the total frequency, and not using percentages. The angle for the first section is measured from a vertical radius. Subsequent sections are measured using the boundary line of the previous section.</i></p>
Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
<ul style="list-style-type: none"> Show me a pie chart representing the following information: Blue (25%), Red (over 50%), Yellow (the rest). And another. And another. Always / Sometimes / Never: Pie charts are constructed in a clockwise direction Always / Sometimes / Never: The larger the size of the pie chart, the greater the total frequency Kenny says 'If two pie charts have the same section then the amount of data the section represents is the same in each pie chart.' Do you agree with Kenny? Explain your answer. <p>NCETM: Statistics Reasoning</p>		<ul style="list-style-type: none"> Some pupils may think that a line graph is appropriate for discrete data Some pupils may think that each square on the grid used represents one unit Some pupils may confuse the fact that the sections of the pie chart total 100% and 360°

KNOWLEDGE

The Big Picture: [Statistics progression map](#)

- calculate and interpret the mean, mode, median and range as an average

[Return to overview](#)

SKILLS		Suggested resources
<ul style="list-style-type: none"> Understand the meaning of 'average' as a typicality (or location) Understand the mean as a measure of typicality (or location) Interpret the mean as a way of levelling the data Calculate the mean of a set of data Choose an appropriate approximation when required Use the mean to find a missing number in a set of data		KM: Maths to Infinity: Averages, Charts and Tables NRICH: Birdwatch NRICH: Probably ... NRICH: Same or Different? NCETM: A little bit of history (Britain since 1945) Learning review <ul style="list-style-type: none"> www.diagnosticquestions.com
Prerequisites	Mathematical language	Agreed Common Teaching Approaches
<ul style="list-style-type: none"> Approximate a number by rounding to a given number of decimal places 	Average Mean Measure Data Statistic Statistics Approximate Round	The word 'average' is often used synonymously with the mean, but it is only one type of average. In fact, there are several different types of mean (the one in this unit properly being named as the 'arithmetic mean'). Other types of average, including the mode and the median, are introduced in later stages. NCETM: Glossary Common approaches <i>Always use brackets when writing out the calculation for a mean, e.g. $(2 + 3 + 4 + 5) \div 4 = 14 \div 4 = 3.5$</i>
Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
<ul style="list-style-type: none"> Always / Sometimes / Never: The mean is a whole number. Kenny is working out the mean of 2, 3, 4 and 5. He calculates $2 + 3 + 4 + 5 \div 4 = 10.25$. Do you agree with Kenny? Explain your answer. The average number of children per family (Married Couples, 2012) is 1.8. Convince me that this statement makes sense. NCETM: Statistics Reasoning		<ul style="list-style-type: none"> If using a calculator some pupils may not use the '=' symbol (or brackets) correctly; e.g. working out the mean of 2, 3, 4 and 5 as $2 + 3 + 4 + 5 \div 4 = 10.25$. Some pupils may think the average is always the middle number Some pupils may think that the mean must be a whole number Some pupils may not realise that the mean must lie within the range of the data set.

KNOWLEDGE

The Big Picture: [Probability progression map](#)

- relate relative expected frequencies to theoretical probability, using appropriate language and the 0 - 1 probability scale (NEW, ALSO 7)

SKILLS		Suggested resources
<ul style="list-style-type: none"> • Know that probability is a way of measuring likeliness • Know and use the vocabulary of probability • Understand the use of the 0-1 scale to measure probability • Assess likeliness and place events on a probability scale • List all the outcomes for an experiment • Identify equally likely outcomes • Work out theoretical probabilities for events with equally likely outcomes • Know how to represent a probability • Recognise when it is not possible to work out a theoretical probability for an event • Know that the sum of probabilities for all outcomes is 1 • Apply the fact that the sum of probabilities for all outcomes is 1 		
Prerequisites	Mathematical language	Agreed Common Teaching Approaches
<ul style="list-style-type: none"> • Understand the equivalence between fractions, decimals and percentages • Compare fractions, decimals or percentages • Simplify a fraction by cancelling common factors 	Probability, Theoretical probability Event Outcome Impossible, Unlikely, Evens chance, Likely, Certain Equally likely Mutually exclusive Exhaustive Possibility space Experiment Notation Probabilities are expressed as fractions, decimals or percentage. They should not be expressed as ratios (which represent odds) or as words	It is not immediately apparent how to use words to label the middle of the probability scale. 'Evens chance' is a common way to do so, although this can be misleading as it could be argued that there is an even chance of obtaining any number when rolling a fair die. NRICH: Introducing probability NRICH: Why Do People Find Probability Unintuitive and Difficult? NCETM: Glossary Common approaches <i>Every classroom has a display of a probability scale labeled with words and numbers. Pupils create events and outcomes that are placed on this scale.</i>
Reasoning opportunities and probing questions	Cross Curricular Links	Possible misconceptions
<ul style="list-style-type: none"> • Show me an example of an event and outcome with a probability of 0. And another. And another... • Always / Sometimes / Never: if I pick a card from a pack of playing cards then the probability of picking a club is $\frac{1}{4}$ • Label this (eight-sided) spinner so that the probability of scoring a 2 is $\frac{1}{4}$. 		<ul style="list-style-type: none"> • Some pupils will initially think that, for example, the probability of it raining tomorrow is $\frac{1}{2}$ as it either will or it won't. • Some students may write a probability as odds (e.g. 1:6 or '1 to 6'). There is a difference between probability and odds, and therefore probabilities must only be written as fractions, decimals or percentages. • Some pupils may think that, for example, if they flip a fair coin three times and obtain three heads, then it must be more than likely they will obtain a head next.
